

Introducing amazon smart plug

Add voice control to any indoor outlet

CDN \$34.99

- Amazon Smart Plug works with Alexa to add voice control to any outlet.
- Schedule lights, fans, and appliances to turn on and off automatically, or control them remotely when you are away.
- Simple to set up and use—plug in, open the Alexa App, and start using your voice.
- No smart home hub required—set up routines and schedules through the Alexa App.
- Compact design keeps your second outlet free.

Make your home smart

Amazon Smart Plug lets you voice control your lights, fans, coffee makers, and more. All you need is an Alexa-enabled device like Echo, Fire TV, Fire tablet, Sonos One, or even just the Alexa app on your phone. And with multiple Amazon Smart Plugs, you can control multiple outlets.

Set up helpful routines

Use the Alexa app to create routines for your Amazon Smart Plug that make life easier—all you have to do is ask. For example, you can create a morning routine that turns on lights and your coffee maker with a single request.

Simple to set up and use

1. Plug in Amazon Smart Plug. If your Alexa app says “New plug found,” go straight to Step 3.
2. Connect to the internet with the Alexa app.
3. Just ask Alexa for “smart home control.”

“Alexa, goodnight.”

“Alexa, turn off the coffeemaker.”

“Alexa, turn off the lights.”

“Alexa, start my day.”

“Alexa, turn on the living room fan.”

“Alexa, nap time.”
